

Some thoughts on the Federalization of our US Elections

Charles Bernardin
(aka Guy_Smith on Telegram)

INTEREST IN POLITICS...**

**DOESN'T MEAN POLITICS WON'T
TAKE AN INTEREST IN YOU.” -PERICLES**

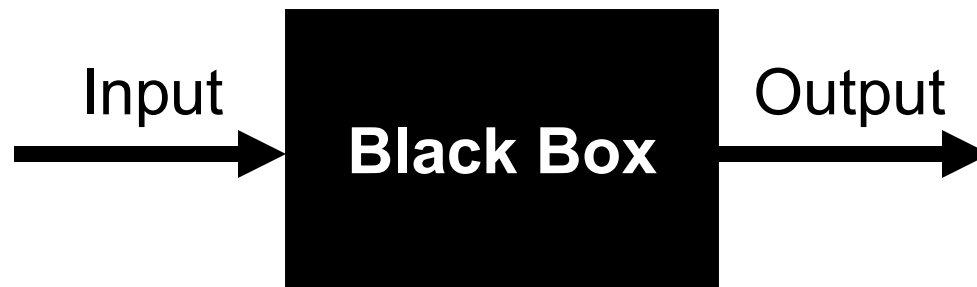

The Systems Approach

The Obama Administration essentially made it Illegal for Citizens to Audit their Elections

How do you Audit a “Black Box” System that the Government has Classified as Secret?

You Crowd Source it across the Internet to the best citizen volunteer workers you can get

Many Technical Teams must get involved, but especially the System Engineers

System Engineering/Analyst Approach: So What's in the Box?

Contrary to the Popular narrative, our Elections have received accurate Crowd-Sourced Citizen Audits thanks to many Systems Analysts: Dr. Frank, Draza Smith, Jeff Young, Jeff O'Donnell, Seth Keshel, Erin Clements, Dr. Daugherty, Dr. Shiva,

We know they're cheating, and **mostly** how they're cheating

Eric Schmidt's 2014 Email on How to Build the Election Rigging Machine*

-Lets assume a total budget of about \$1.5Billion, with more than 5000 paid employees and million(s) of volunteers. The entire startup ceases operation four days after November 8, 2016.

-The computers will be in the cloud and most likely on Amazon Web services (AWS). All the campaign needs are portable computers, tablets and smart phones along with credit card readers.

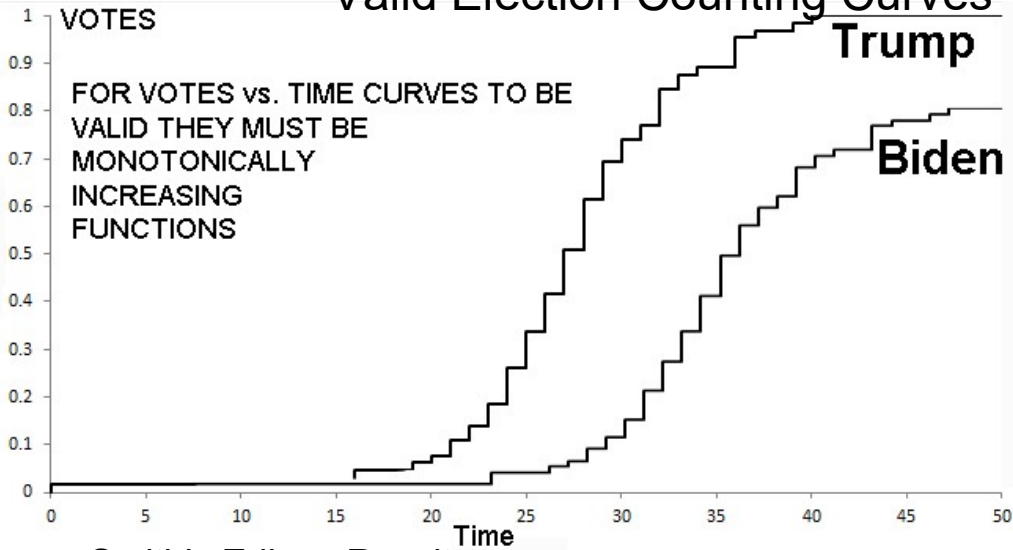

-Initial modeling will show heavy hiring in the key battleground states.

-Key is the development of a single record for a voter that aggregates all that is known about them. The key unit of the campaign is a "voter", and each and every record is viewable and updatable by volunteers in search of more accurate information.

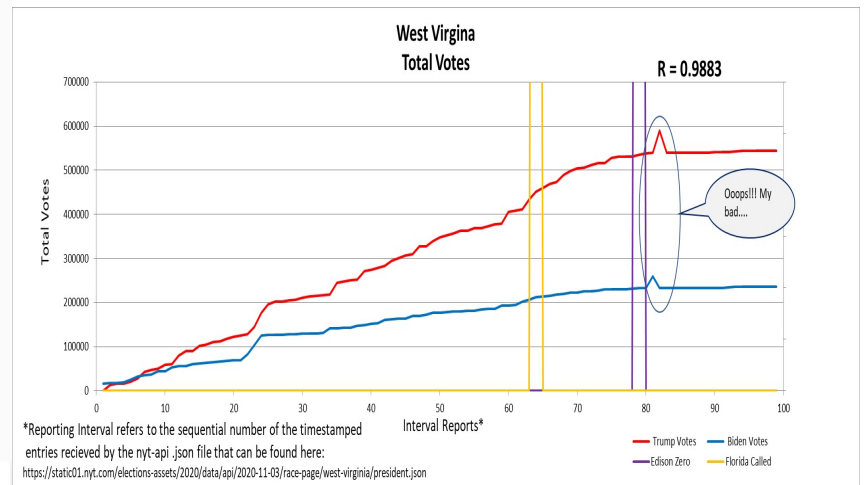

-In the case where we can't identify the specific human, we can still have a partial digital voter id, for a person or "probable-person" with attributes that we can identify and use to target. As they respond we can eventually match to a registered voter in the main file. This digital key is eventually matched to a real person.

Modifying Voter Roles with Phantom Voters

How Big Brother has been modulating the Voter roles in Colorado over the last 3 Elections They do this to give themselves plenty of Phantom voters for their Candidate on Election Day. They're doing the same dance in every other State in our Union. (from Jeff Young)

"They've given you a Number and they've taken (a)way your Name" – Johnny Rivers

Block Diagram of the Vote Rigging System

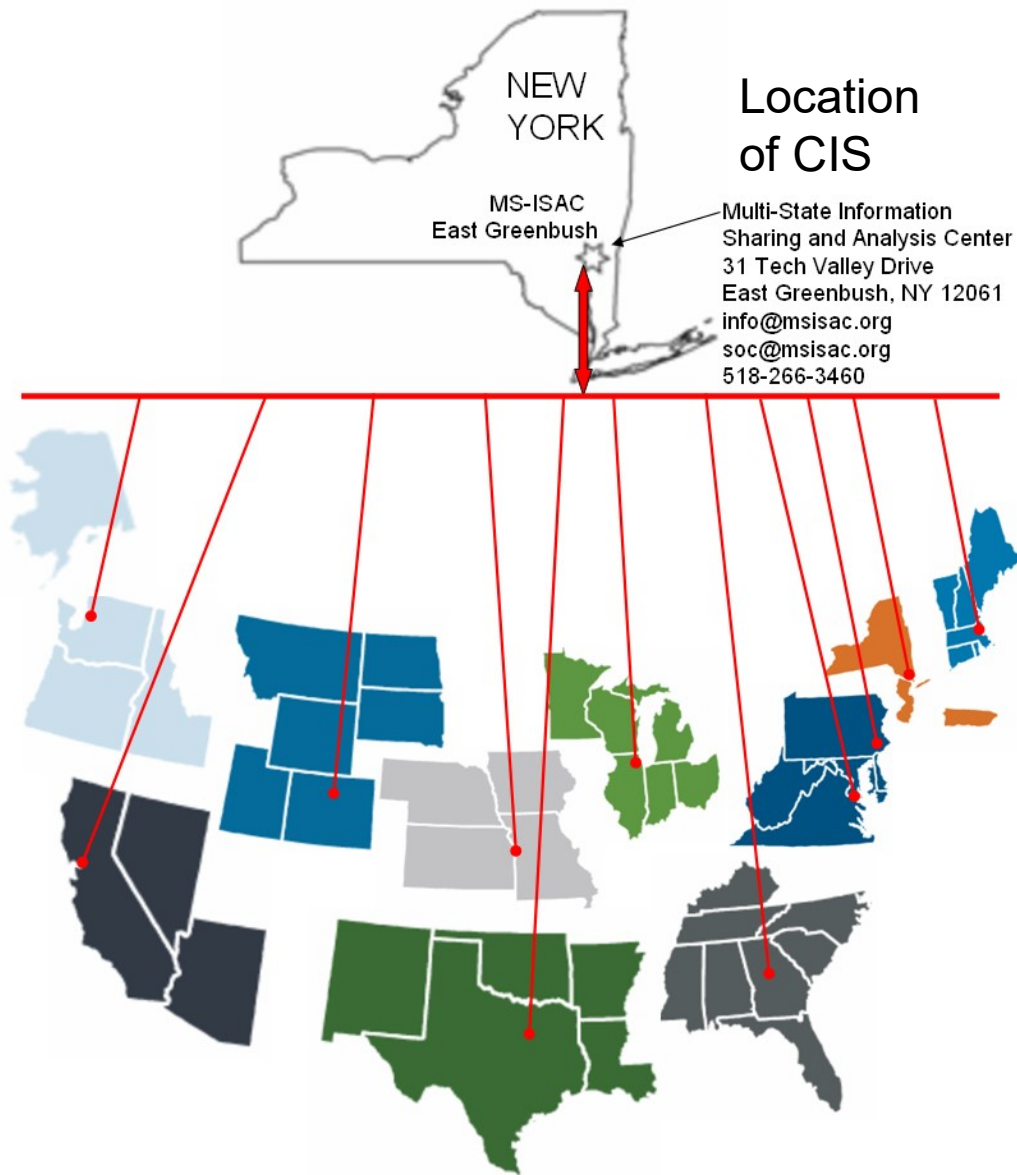

Today's Incarnation of Eric Schmidt's Design

- Get Out The Vote (GOTV) pre-canvasses high value regions to geolocate Phantom Voters (e.g. Campaign Sidekick, VoteBuilder...)
- Depart. of Motor Vehicles (DMV) data is also used to generate Phantom Voters
- Electronic Information Registration Center (ERIC) generates the Phantom Voters
- Runbeck et al Print the Mail-In-Ballots for the Phantom Voters
- The USPS mails out the Phantom Ballots and likely forwards the undeliverables for others to "process"
- The Electronic Drop Boxes are a major source for Phantom Ballot Harvesting
- UOCAVA Overseas votes are another source for major fraud (no room to explain here)
- The DHS through their Proxy NGOs likely monitors the Election Counts via the E-911 services in the name of securing the Elections and likely changes the counts so that their desired candidate(s) wins
- Ericsson enables the monitoring and count reporting by WiFi connections to the E-Poll books which are backhauled to their radio equipment at AT&T or Verizon Fiber Networks
- The Tabulators (Dominion, ES&S, or Hart) are at the periphery of the Centralized (at East Greenbush, NY) steal

This is why we need to get rid of the Electronics in our Elections and go back to paper.

DHS Network Election Monitoring Structure

Multi-State Information Sharing and Analysis Fusion Network

Another very important part of this is the Department of Homeland Security's (DHS) Election Night (/Month) Hijacking via the E-911 Public Emergency system, which is largely run with Ericsson equipment.

In 2018 the DHS Federalized the majority of our Municipal Elections via their Private Public Partner CIS. Their monitoring appears to be linked to our National Criminal Justice Network.

So on Election night they have a Centralized Network monitoring and likely manipulating our County vote tallies. They use the same regional structure as our FEMA services.

CIS: Center for Internet Security, Inc.

-CIS, stands for "Center for Internet Security, Inc.". They are an NGO hired by the DHS

-It is the legal corporation that signed contracts (MOAs) with Entities like the Municipal Government Officials: County Judges, County Boards of Elections, or Secretaries of State in 2018.

-The purpose of these contracts was to give the Elections Infrastructure Information Sharing and Analysis Center ("EI-ISAC"), located at 31 Tech Valley Drive, East Greenbush, NY, complete access to the Local County IP-Connected equipment.

-This was of course done so that CIS could provide 24/7 "Cybersecurity Services" and Ransomware "protection" in the name of providing Public Safety. To be safe, these Entities had to disclose to CIS their **entire network of IP connected equipment**.

-There were other Terms in the agreement. But in summary it appears to be a legal boiler-plate that has given the FEDS complete control of their Municipal Elections and all the Local Bureaucrats contend they are much safer now because of it.

-What CIS means by "Secure" is: "keeping what we're really doing a secret from any real auditor"

The CIS is the head of the DHS Snake

Recognize Kathy Boockvar, ex-PA SoS?

<https://www.youtube.com/watch?v=6uiEv--mQd0&t=0s>

CIS co-produced the “Securing Elections–Global Lessons Learned” forum with Auburn University’s Center for Cyber and Homeland Security and the Estonian Embassy. Participants included DHS Secretary Michael Chertoff, former President of Estonia Toomas Ilves, as well as several global elections experts from around the world, including CIS President & CEO John Gilligan.

<https://www.cisecurity.org/insights/white-papers/cis-2020-year-in-review>

CIS (continued 1)

CIS is basically in charge of developing and maintaining non-HAVA, non-voting technology like *voter registration databases, electronic pollbooks, or the websites of government election authorities*. So basically nothing CIS is doing has to be HAVA compliant or even accredited. Yet their registration databases and pollbooks are used everywhere in our elections.

About CIS*

The Center for Internet Security, Inc. (CIS®) makes the connected world a safer place for people, businesses, and governments. We are a community-driven nonprofit, responsible for the CIS Controls® and CIS Benchmarks™, globally recognized best practices for securing IT systems and data. We lead a global community of IT professionals to continuously refine these standards to proactively safeguard against emerging threats. Our CIS Hardened Images® provide secure, on-demand, scalable computing environments in the cloud. CIS is home to the Multi-State Information Sharing and Analysis Center® (MS-ISAC®), the trusted resource for cyber threat prevention, protection, response, and recovery for U.S. State, Local, Tribal, and Territorial government entities, and the Elections Infrastructure Information Sharing and Analysis Center® (EI-ISAC®), which supports the cybersecurity needs of U.S. elections offices. To learn more, visit [CISecurity.org](https://www.CISecurity.org) or follow us on Twitter: @CISecurity

*(page 6 of <https://www.nass.org/sites/default/files/2020-01/white-paper-cis-nass-winter20.pdf>)

CIS (continued 2)

-CIS was also one of the organizations (NGOs) that communicated with the DHS through JIRA. JIRA allowed the Deep State to take out a Ticket for each Mis-Dis-Mal information event and ensure that the appropriate actions were completed to remove the "Threat".

<https://www.youtube.com/watch?v=JZ2fV-XnLk0>

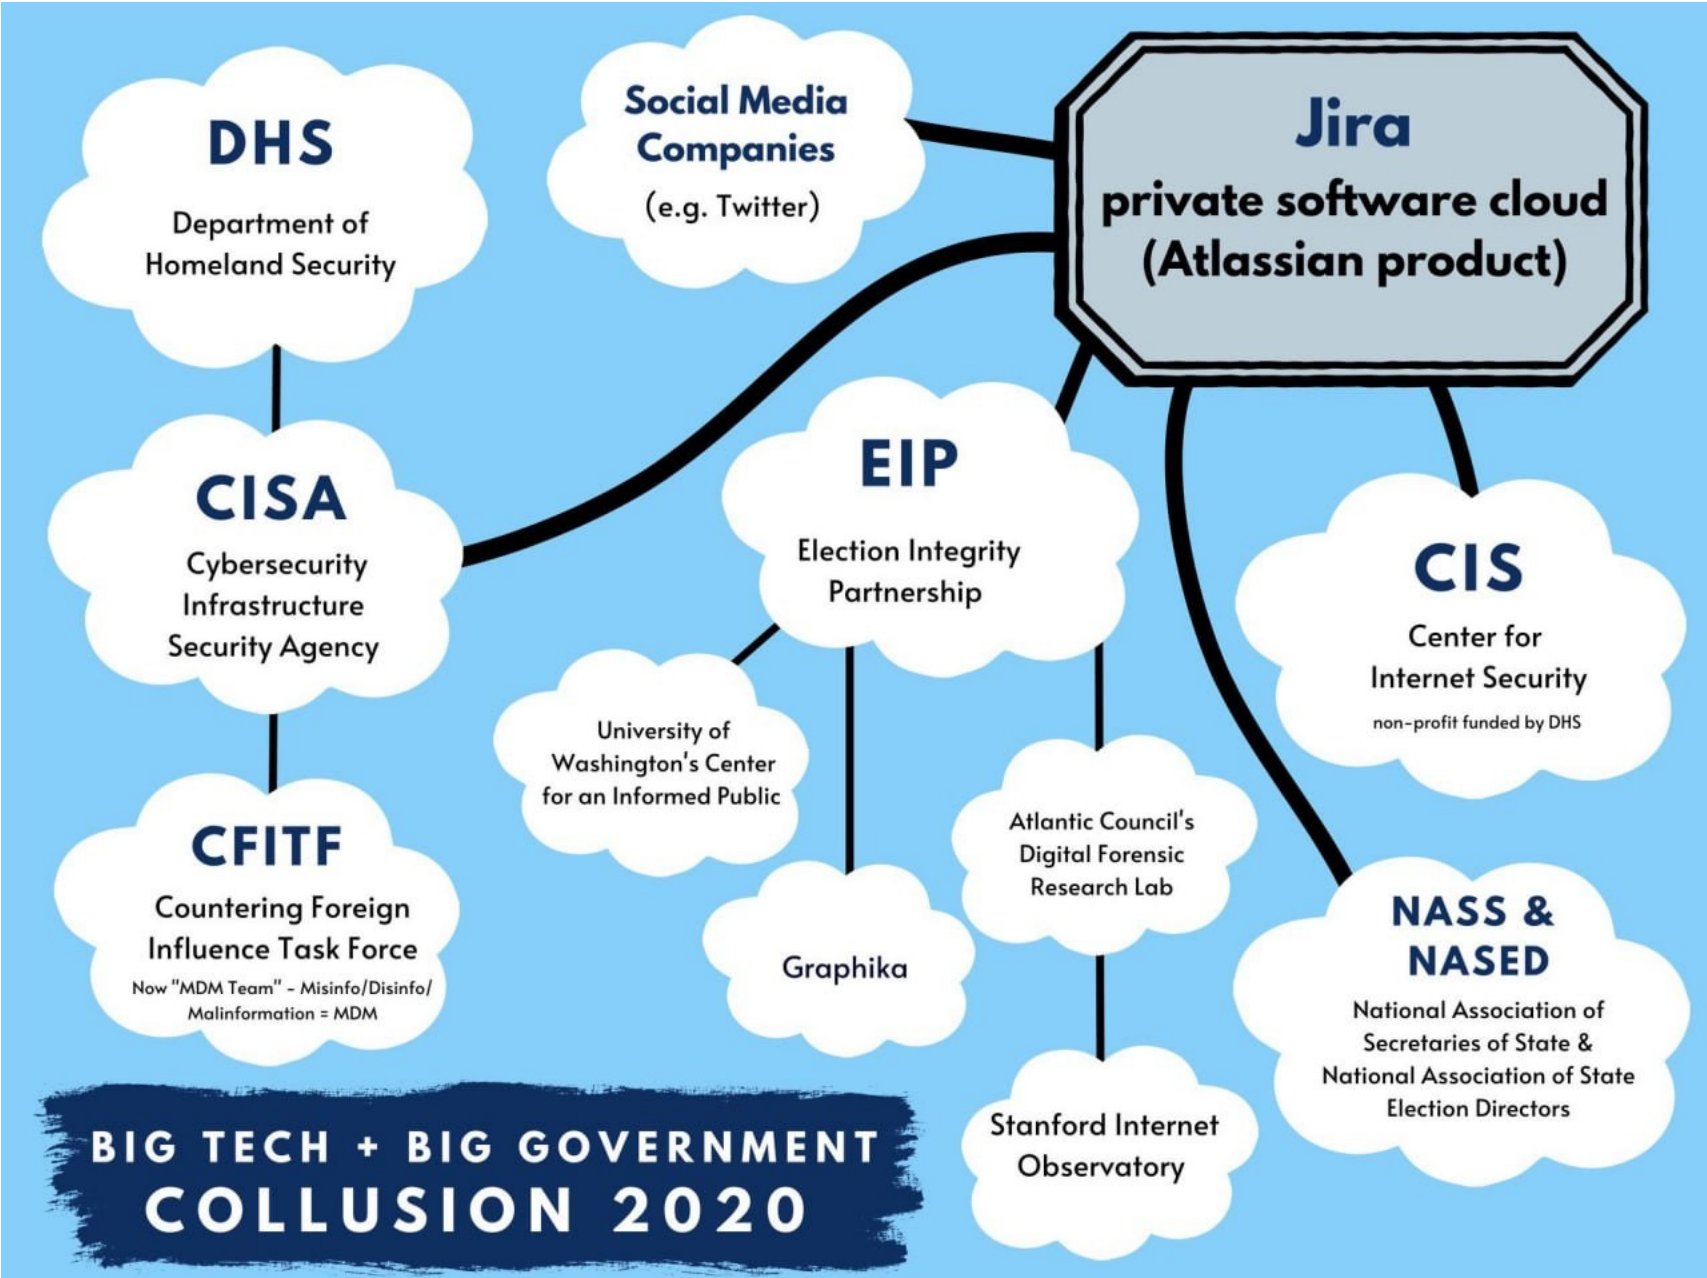

-If you remember Representative Luna cross examined Yoel Roth, the ex-Global Head of Trust & Safety at Twitter, about JIRA in the Weaponization of Government hearing recently.

-CIS was apparently created to address the development of "Non-Voting", non-HAVA, technologies that support elections such as: ***Examples include voter registration databases, electronic pollbooks, or the websites of government election authorities.***

-These efforts were developed primarily under the RABET-V program of CISA.

Censorship & Election Rigging Dashboard

DHS' new role: a "Domestic CIA"

DHS's new role, essentially, combines the foreign powers over speech and censorship granted to the CIA with the domestic reach of the FBI. This is why you may have heard, in videos above, references to DHS having to develop a hybrid of the "IC" (intelligence community) and the FBI:

So we now have, for the first time ever allowed in the US government, essentially a form of "domestic CIA" interfering with impunity in the lawful speech of US citizens, stopping them from talking freely about their own elections or criticizing their own democratic institutions.

And this hybrid IC-FBI apparatus need not distinguish between speech that is foreign or domestic, lawful or unlawful. It is simply an intelligence capacity turned strictly inwards.

Our Constitutional Authority

Article IV Relationships Between the States

Section 4 Republican Form of Government

The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

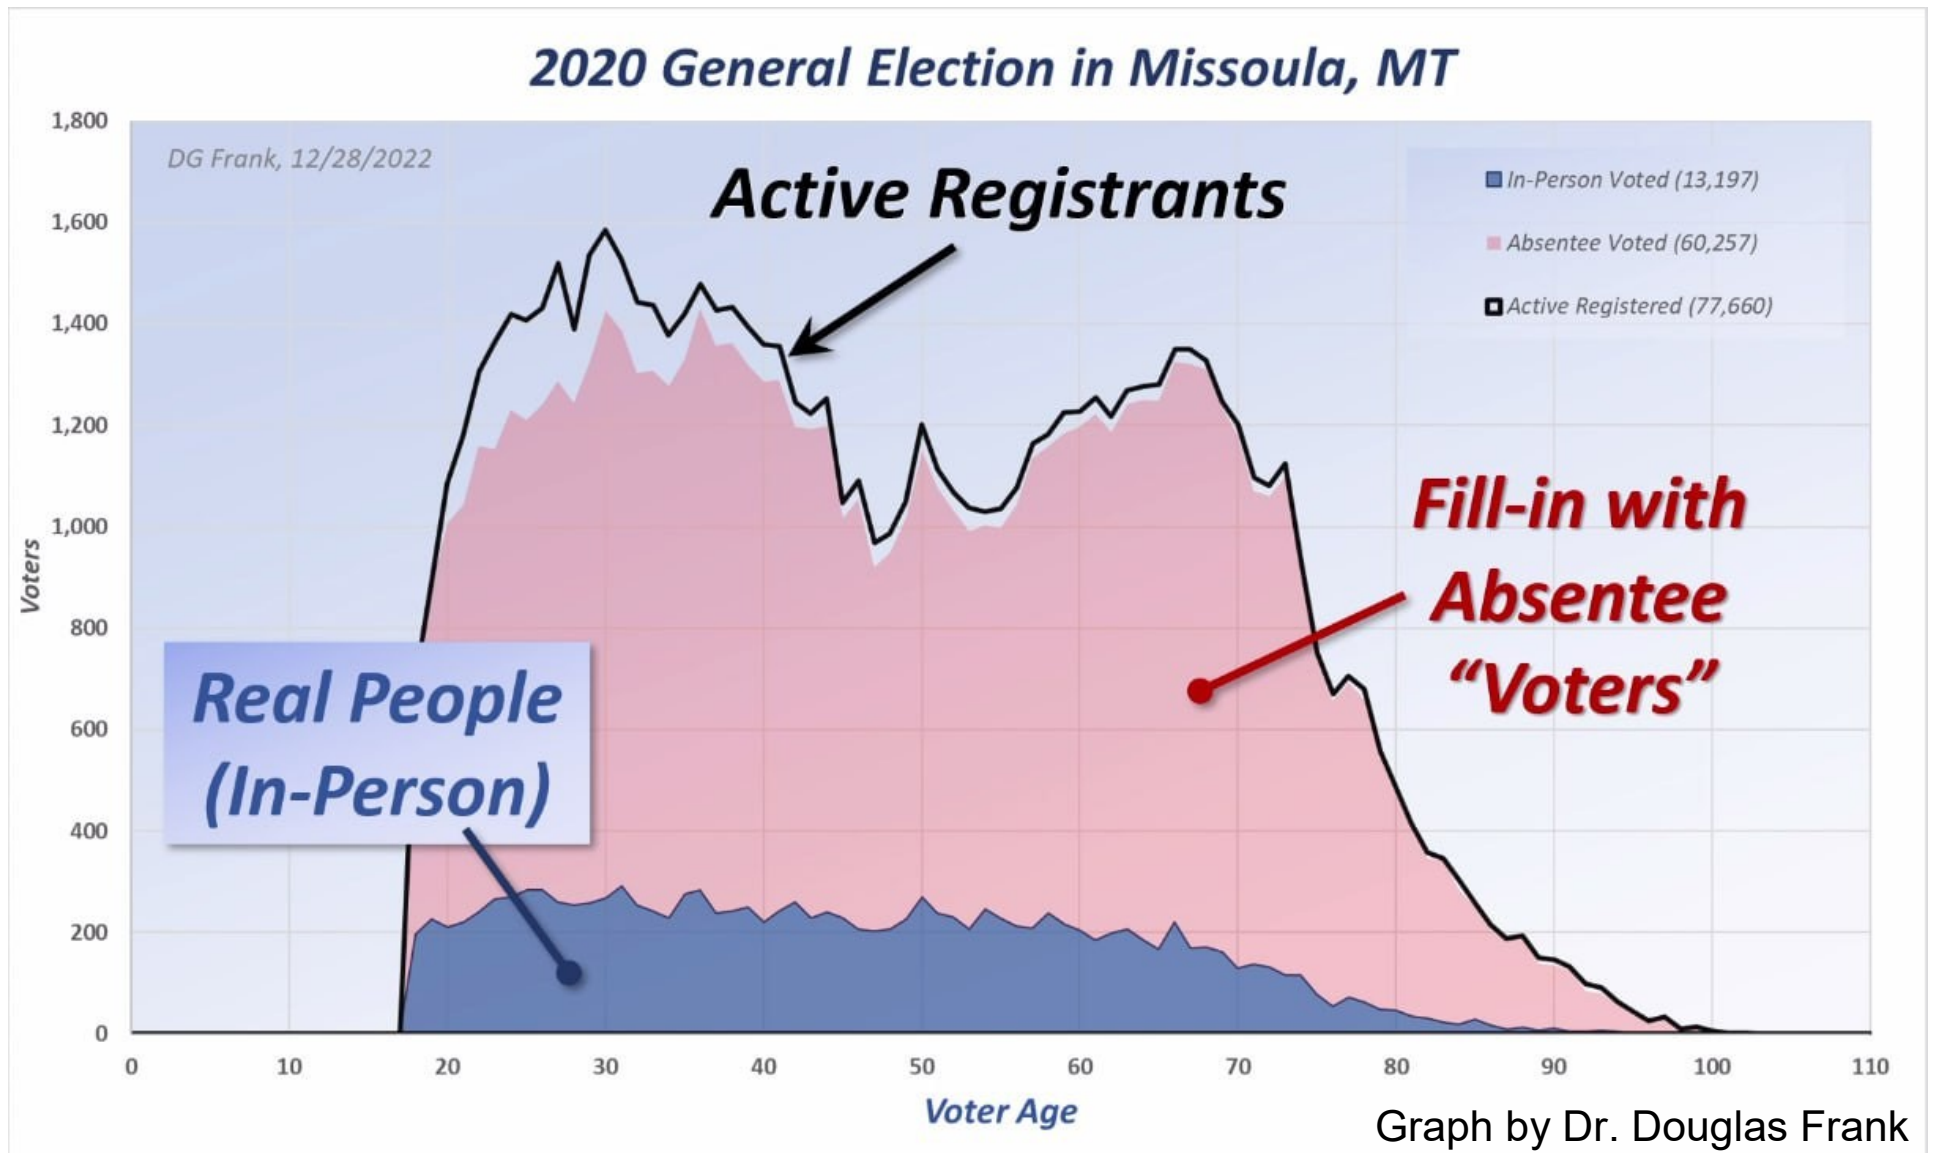

Declaration of Independence (1776)

But when a long Train of Abuses and Usurpations, pursuing invariably the same Object, evinces a Design to reduce them under absolute Despotism, it is their Right, it is their Duty, to throw off such Government, and to provide new Guards for their future security.

Law of Large Numbers

Don't be afraid; there's more of us than them – Dan Scavino

“You Can’t Out-Harvest Hi Speed Printers” -Jeff Young

The Solution

-Get rid of the Black Box System
and “Vote Amish” (Dr. Frank)

-The key is more oversight,
not more technology.

"Paper Ballots. Hand Marked. Hand or Machine Counted at the Precinct. Public can view. Posted locally. Confirmed at county level. Ballots kept for audit and recount. This is how all working democracies do it. Anything else is hackable. There, hackers are out."

- **Stephen Spoonamore**, October 2, 2019
